

2012 INTERNATIONAL AUTOMOTIVE TIRE CATALOG

MAXXIS USA - ATLANTA

Founded in 1967, Cheng Shin Rubber Ind. Co., Ltd, d/b/a Maxxis International began as a manufacturer of bicycle tires in Taiwan. Growing steadily, Maxxis eventually became the largest manufacturer of bicycle tires in the world - as it is today.

In the ensuing decades, Maxxis has expanded into new market segments, offering products for motorcycles, ATVs, lawn and garden products, race karts, industrial vehicles, trailers, autos, light trucks, trucks and buses.

Today, Maxxis is truly a global company, with operations in Taiwan, China, Thailand, Vietnam, the United States, Canada, Great Britain, Germany, Holland, Japan and Dubai. Maxxis has opened many new factories and distribution facilities and serves consumers in approximately 170 countries.

But no matter how large we become, the people at Maxxis will always remember that creating and retaining lifelong customers is our primary purpose.

MAXXIS TECHNOLOGY CENTER - ATLANTA, USA

R&D CENTER - YUANLIN, TAIWAN

R&D CENTER - SHANGHAI, CHINA

XIAMEN, CHINA

- Original equipment supplier to Ford, GM, Toyota, Nissan, Volkswagen, Mitsubishi and Hyundai in Asia
- Original equipment supplier of motorcycle tires to Yamaha, Honda, Suzuki and Kawasaki
- Original equipment supplier of ATV tires to Honda, Yamaha, Suzuki, Kawasaki, Polaris and KTM
- Original equipment supplier of bicycle tires to Cannondale, Giant, Merida, Yeti, Iron Horse, Kona and Orange
- Original equipment supplier of scooter tires to Yamaha, Suzuki, Aprilia, Malaguti, Piaggio, MBK, Gilera and Kymco

iPro Victra

- Ultra High Performance tire designed for driving enthusiasts
- Directional tread pattern features large semi-continuous shoulder blocks to maximize contact patch under spirited driving
- Solid center rib offers extra stability and confidence at higher speeds
- Enhanced sidewall design with a hard bead filler maximizes steering feedback and lateral stability
- Four wide circumferential grooves improve hydroplaning resistance
- Jointless spiral-wound cap ply maximizes ride refinement and durability
- UTQG 240 AA A

Pro-R1

- Ultra High Performance tire designed for premium sport sedans and coupes
- Five-rib tread pattern design with multi-pitch tread block arrangement reduces pattern noise while increasing dry performance
- Continuous shoulder-rib design minimizes tread squirm under cornering, enhancing cornering stability and steering feedback
- Four wide circumferential grooves provide excellent hydroplaning resistance and wet traction
- New microsilica-infused compound reduces rolling resistance and improves wet traction
- Jointless spiral-wound cap ply maximizes ride refinement and durability
- High-stiffness casing for improved high-speed stability and handling
- UTQG 240 AA A

MA-Z3 Victra

- Ultra high performance tire designed for sport cars and sedans
- Aggressive directional tread with two circumferential grooves reduces pattern noise and hydroplaning resistance while retaining good performance under dry road conditions
- Multi-pitch tread blocks reduce pattern noise and improve overall driving experience
- Large 3D shoulder tread blocks increase tread stiffness for better handling and steering response while improving tread wear
- New microsilica-infused compound reduces rolling resistance and improves wet traction
- Jointless spiral-wound cap ply maximizes ride refinement and durability
- New tread base rubber compound reduces excessive heat generation for consistent handling and wear performance
- High-stiffness casing for improved high-speed stability and handling
- UTQG 280 AA A & UTQG 220 AA A

BSW - Black Sidewall

OWL - Outline White Letter

OBL - Outline Black Letter

XL - Extra Load

Sizes may be limited by market.

MA-V1

- All-Season High Performance tire designed for sport touring vehicles
- Directional high-void pattern combined with specialized compound optimizes all-season performance
- Jointless spiral-wound cap ply maximizes ride refinement and durability
- High Performance reinforcement belt package improves stability and handling
- Unique sidewall construction designed to strike an optimal balance between cornering performance and ride refinement
- M&S All-Season rated (except 225/45R18)
- UTQG 300 A A
- UTQG 340 A A for 60 and 65 series

M36 Victra

- Ultra High Performance tire designed for luxury sport-sedans
- Solid center rib with siping designed for high-speed stability and extra traction
- Continuous outer shoulder design enhances cornering stability
- Four wide circumferential grooves provide excellent hydroplaning resistance and wet traction
- Jointless spiral-wound cap ply maximizes ride refinement and durability
- Innovative tread compound promotes outstanding wet and dry traction
- UTQG 240 AA A

M35 Victra Asymmet

- Ultra High Performance tire designed for luxury sport-sedans
- Asymmetrical non-directional tread pattern allows cross-rotation to maintain noise performance throughout the life of the tire
- Semi-continuous inner ribs offer extra stability during braking and acceleration
- Four wide circumferential grooves improve hydroplaning resistance
- Computer-optimized tread block arrangement and pitch sequence offer a quiet and refined ride
- Jointless spiral-wound cap ply maximizes ride refinement and durability
- Innovative silica tread compound promotes outstanding wet and dry traction
- UTQG 280 AA A for 55 and lower series
- UTQG 280 A A for 60 and higher series

OBL - Outline Black Letter

XL - Extra Load

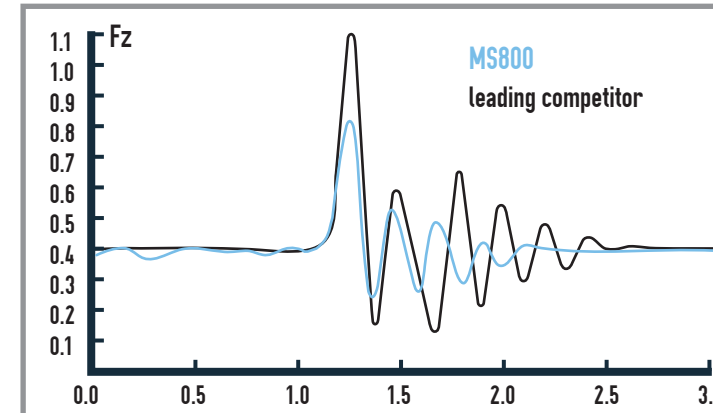

Sizes may be limited by market.

Inferior dispersion allows traditional silica fillers in rubber compounds to cluster together - generating wasted heat.

Highly dispersible silica in Maxxis' new FDSS compound promotes excellent filler dispersion - minimizing heat generation and energy dissipation.

Road imperfections such as expansion joints and potholes are major sources of discomfort and fatigue for a car's occupants. The Maxxis MS800 is designed to absorb and dampen shocks, minimizing impact and disturbance to the interior cabin. As the graph to the left shows, internal tests prove that the MS800 can absorb shocks better and faster than the leading competitor's tire in its class.

The MS800 tire outperforms the leading competitor in braking performance. Internal testing shows the MS800 shortening straight-line braking distance by 5.6 feet in wet conditions (50mph - 0) and 3.9 feet in dry conditions (62mph - 0).

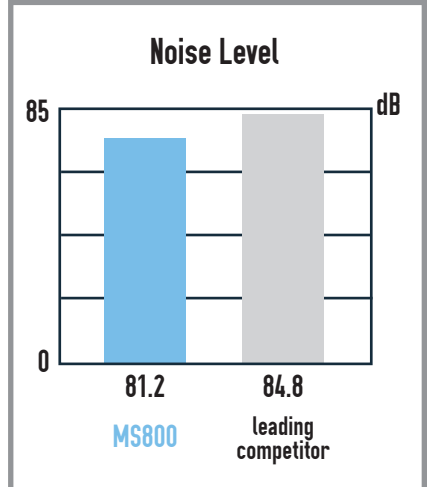

Internal Testing: The MS800 travels 63.4 yards more than the leading competitor's product during a coast-down vehicle test from 50 mph to 25 mph.

FDSS Rubber: Highly dispersible nano-silica fillers interact with functional groups on rubber chains - strengthening filler-rubber interaction for lower rolling resistance.

Fuel Economy: Lower rolling resistance means less fuel consumption and smog emissions from vehicle.

Environmental Concerns: Use of environmentally-friendly oils helps the MS800 to surpass European environmental standards and minimize environmental threat.

MS300 Waltz

- Ultra High Performance tire designed for premium touring vehicles
- Computer-optimized tread pattern designed to minimize pattern noise
- Semi-continuous outer shoulder design provides improved steering precision and response
- Strategically placed siping enhances wet traction
- 7 circumferential grooves offer superior hydroplaning resistance
- Overall construction design focuses on improving overall driving refinement
- Jointless spiral-wound cap ply maximizes ride refinement and durability
- UTQG 320 A A

MA-Z4S Victra

- Ultra High Performance All-Season tire designed for drivers that demand sporty handling with all-season traction
- Solid center rib designed for high-speed stability
- V-shaped unidirectional grooves for improved handling on dry and wet roads
- Jointless spiral-wound cap ply maximizes ride refinement and durability
- 4 high-void, circumferential main grooves expel water for enhanced wet traction
- 5-pitch tread blocks and 2-in-1 groove designs minimize noise for a quiet, comfortable ride
- M&S All-Season rated
- UTQG 420 AA A

R-19

- Designed for rally racing applications ONLY
- Multiple independent tread blocks and closed sipe design improve acceleration and braking traction
- Sharp tread blocks and reinforced sidewall casing design deliver optimum handling and feedback
- Specially formulated tread compound and rib protector design enhance impact and puncture resistance
- Available in soft and hard tread compound
- Computer-optimized pattern design for minimized rock retention and improved water dispersion performance

R19L FOR LEFT SIDE, R19R FOR RIGHT SIDE; "S" IN SIZE DESCRIPTION MEANS SOFT COMPOUND, WITHOUT "S" MEANS HARD COMPOUND

RC-1

- DOT-approved R-compound race tire designed for dry road racing applications ONLY
- Specially formulated racing compound delivers outstanding dry traction while retaining excellent heat cycle and wear performance
- Balanced sidewall design and unique race compound deliver smooth breakaway characteristics and excellent handling
- Dual wide circumferential grooves designed for adequate performance in sudden wet weather conditions
- UTQG 100 AA A

MA-656

- All-Season touring tire designed for safety and peace of mind
- Four wide circumferential grooves provide excellent hydroplaning resistance in wet conditions
- Multi-pitch tread block technology minimizes pattern noise for a quiet and comfortable ride
- All-Season tread compound maximizes ride comfort and tread wear
- Closed sipe design enhances ride comfort and traction on wet and snowy surfaces
- M&S All-Season rated
- UTQG 340 A A for 55 series and below
- UTQG 380 A A for 55 series plus

Escapade CUV

- All-Season High Performance tire designed for crossover utility vehicles
- Adaptive Response Sidewall technology delivers a smooth ride when cruising and excellent handling during spirited driving
- Straight and slanted circumferential grooves increase water dispersion efficiency for excellent hydroplaning resistance and wet weather performance
- Large outer shoulder block design increases overall lateral stiffness for improved cornering and handling
- 2-in-1 groove design on inner shoulder increases wet weather traction while improving overall wear pattern
- Multi-pitch tread block technology minimizes pattern noise for a quiet and comfortable ride
- M&S All-Season rated
- UTQG 420 A A

MA-S2 Marauder II

- All-Season Performance tire designed for SUV or light truck
- Directional high-void pattern designed for excellent all-season traction
- Jointless spiral-wound cap ply maximizes ride refinement and durability
- Solid center rib offers extra stability and confidence at higher speeds
- Overall construction designed to improve lateral stability and handling on SUV/LT vehicles
- Unique sidewall construction designed to improve steering precision, response and ride refinement
- Pronounced rim protector built to protect your wheels from curb damage
- M&S All-Season rated
- UTQG 360 A A

MA-S1 Marauder

- All-Season Performance tire designed for SUV or light trucks
- Directional high-void pattern designed for excellent all-season traction
- Jointless spiral-wound cap ply maximizes ride refinement and durability
- Overall construction designed to improve lateral stability and handling on SUV/LT vehicles
- Unique sidewall construction designed to strike an optimal balance between cornering performance and ride refinement
- M&S All-Season rated
- UTQG 360 A A H - speed rating
- UTQG 360 A B S - speed rating

HP-600

- Optimal tread design for decreased tread squirm and better handling
- Four U-shaped circumferential grooves designed for excellent hydroplaning resistance
- Multi-pitch tread block design minimizes tread pattern noise
- Jointless spiral-wound cap ply maximizes ride refinement and durability
- Special tread compound formulated for outstanding comfort, mileage and wet/dry traction
- UTQG BSW 420 A A (50 series and up)
- UTQG OWL 420 A B (Metric sizes only)
- UTQG 480 A A (60 series and up)
- UTQG 480 A B S – speed rating

HT-770 Bravo Series

- Premium highway terrain tire designed for light truck and SUVs
- Ripple sipe design improves overall wear pattern and traction on slippery surfaces
- Dual circumferential grooves increase water dispersion efficiency for improved hydroplaning resistance
- Multi-pitch tread blocks minimize pattern noise for a quiet and serene cabin
- Closed shoulder design limits noise resonance in tread area which further reduces cabin noise
- M&S All-Season rated
- UTQG 640 A B (Metric Sizes ONLY)
- 60,000 mile limited treadwear warranty** (non LT sizes only)

AT-771 Bravo Series

- All-Season, All-Terrain tire designed for excellent off-road performance while retaining on-road refinement
- Multi-pitch tread pattern design minimizes pattern and road noise while maintaining excellent off-road performance
- Staggered shoulder lug design creates a biting edge for extra off-road traction
- 3D tread blocks provide additional stiffness to minimize irregular wear and increase overall stability
- Four unique U-shaped circumferential grooves offer excellent hydroplaning resistance while minimizing rock retention
- Jointless spiral-wound cap ply maximizes ride refinement and durability
- Overall construction designed to improve off-road stability and handling
- UTQG 500 A B (Metric sizes only)
- 50,000 mile limited treadwear warranty** (non LT sizes only)

MA-751 Bravo Series

- Double steel-belted construction for long-lasting wear and uniformity
- Jointless spiral-wound cap ply maximizes ride refinement and durability
- All-Season tread pattern delivers a smooth, quiet ride for light truck and sport utility vehicles
- Specially formulated rubber compound allows for exceptional handling in various road and weather conditions
- M&S All-Season rated
- UTQG 420 A B (P-metric sizes only)
- 40,000 mile limited treadwear warranty (non LT sizes only)**

*3-ply sidewall

BSW - Black Sidewall

OWL - Outline White Letter

OBL - Outline Black Letter

XL - Extra Load

Sizes may be limited by market.

UE-168(N) Bravo Series

- Double steel-belted construction for long-lasting wear and uniformity
- Jointless spiral-wound cap ply maximizes ride refinement and durability
- Rib-type tread design with deep shoulder grooves provides all-season capability
- Continuous shoulder ribs provide smooth, even tread wear and increased tread life
- Premium rubber compound and extra plies* resist cuts, punctures and abrasions
- Extra heavy-duty sidewall construction delivers responsive handling and performance under demanding commercial applications

*3-ply sidewall

BSW - Black Sidewall

OWL - Outline White Letter

OBL - Outline Black Letter

XL - Extra Load

Sizes may be limited by market.

MT-764 Bighorn

- Staggered shoulder-lugs for added traction on uneven terrain
- Deep tread blocks with high void-ratio tread pattern improve self-cleaning performance in mud
- 3D tread block design provides additional traction edge on slippery and wet terrain
- Stone-ejector elements in tread area minimize rock retention and improve self-cleaning performance
- Aggressive sidewall design provides additional traction and puncture protection on demanding terrain
- Three body-ply construction in select sizes for additional puncture resistance and toughness*
- M&S All-Season rated

MT-754 Buckshot Mudder

- Double steel-belted radial construction for long-lasting wear and uniformity
- Jointless spiral-wound cap ply maximizes ride refinement and durability
- Extra-strong, durable casing helps resist punctures and abrasions
- Premium rubber compound with tread siping delivers maximum control in various weather conditions
- Pinned for studs
- M&S All-Season rated
- UTQG 380 AB (P235/75R15)

MT-753 Bravo Series

- Double steel-belted radial construction for long-lasting wear and uniformity
- Jointless spiral-wound cap ply maximizes ride refinement and durability
- Special tread design delivers excellent traction in both on and off-road terrain
- Open shoulder lugs provide exceptional self-cleaning capability
- Premium rubber compound and heavy-duty construction give excellent durability and strength
- Attractive rugged appearance available in outlined white letters or black serrated letters
- M&S All-Season rated

M8060 Trepador

- Aggressive, directional tread design provides excellent dry and wet handling stability on all types of terrain
- Multi-curve tread siping improves traction on loose dirt while enhancing braking and driving performance
- Unique tread element arrangement ensures a uniform tread contact area for sure-footed handling
- Jointless spiral-wound cap ply maximizes ride refinement and durability
- Multi-stage staggered shoulder pattern provides improved control even on the most difficult off-road and rocky terrain
- Nylon belt-reinforced tire construction improves puncture resistance and prolongs tread life
- M&S All-Season rated

SP-02 Arctic Trekker

- Asymmetrical snow tire designed for European winter conditions
- High-density 3D ripple sipes improve overall wear pattern and traction on snow and icy surfaces
- Silica-infused tread compound widens operational temperature range and increases traction on snow and ice
- Saw-tooth pattern design offers superior handling and traction on snowy surfaces
- Bridged shoulder blocks increase tread stiffness and improve tread contact and cornering stability
- M&S/Mountain Snowflake symbol certification

MA-STL Presa Ice

- Advanced tread compound formulation for ice and snow conditions
- Special shoulder design for snow in straight and lateral traction
- Saw-toothed block and high-density sipes arrangement improve grip in snow
- Central saw-toothed groove and rib for improved stability
- Jointless spiral-wound cap ply maximizes ride refinement and durability
- Random pitch arrangement for low noise
- M&S/Mountain Snowflake symbol certification

MA-SAS Victra SUV

- Innovative, unidirectional tread pattern design for improved all-season performance
- Unique pattern design with full-depth siping for extra traction under wet and snowy conditions
- Open shoulder design for better water evacuation and wet weather handling
- Advanced all-weather tread compound for outstanding winter driving confidence
- Optimal casing design delivers a smooth and comfortable ride
- M&S/Mountain Snowflake symbol certification

MA-PW Presa Snow

- Special compound for excellent traction on snow
- Unidirectional tread design for outstanding wet and straight-line handling stability
- High-density lateral sipes for superior grip
- Special low-noise tread pattern pitch sequence design for an ultra-quiet ride
- Additional grooves expel water more efficiently for better wet handling
- M&S/Mountain Snowflake symbol certification

MA-SPW Presa Spike

- Specially formulated soft tread compound for excellent traction on snow and ice
- Unique tread pattern design with high- density sipes effectively enhances snow handling and braking performance
- Pinned for studs
- Random pitch arrangement for low noise
- M&S/Mountain Snowflake symbol certification

MA-SW Victra Snow SUV

- Unidirectional SUV tread design
- High-density lateral sipes
- Random pitch arrangement
- Advanced tread compound for improved braking
- Excellent snow traction
- Superior water drainage and snow removal
- M&S/Mountain Snowflake symbol certification

MA-SLW Presa Spike

- Unidirectional tread design
- Pinned for studs
- Rigid tread blocks enhance grip and handling
- Saw-toothed sipe design for grip
- Advanced tread compound
- Random pitch arrangement for low noise
- M&S/Mountain Snowflake symbol certification

MA-LAS VanPro AS

- Double steel-belted construction for long-lasting tread-life and improved uniformity
- Jointless spiral-wound cap ply maximizes ride refinement and durability
- Continuous shoulder rib design promotes even wear and increased overall tread life
- Heavy-duty sidewall construction delivers responsive handling and durability under demanding commercial applications
- Snow-oriented compound and pattern combine to provide excellent performance in the snow
- Multi-pitch pattern design for minimized pattern noise
- M&S/Mountain Snowflake symbol certification

IMPORTANT TIRE INFORMATION

When customers choose Maxxis, they're getting a product designed to deliver safety along with performance. But even the best tires must be used with caution and with close attention to safe practices. Following the guidelines and recommendations below will help to reduce the chance of accident or injury.

- » Always refer to the vehicle's tire information placard.
 - It is preferable to replace a vehicle's tires with ones that correspond to the vehicle's manufacturer-recommended specifications.
 - Tire speed ratings and load-carrying capacity should always be equal to or greater than the original equipment tires.

Service Description

Most tires have a service description that appears at the end of the tire size. This service description has a two-digit number which represents the load index, and a letter which represents the speed rating. Example: 86H. The load index represents the maximum load each tire is designed to carry at the tire's maximum inflation pressure.

Speed Rating

Speed ratings are certified sustained speed designations assigned to passenger car radials and high performance tires. In the U.S., these ratings are based on tire testing in laboratory conditions under simulated loads. For a tire to be speed-rated, it must meet certain minimum government standards for reaching and maintaining that specified speed. Any speed symbol denoting a fixed maximum speed capability will be at the end of the service description following the load index.

Tire installers should refer to the vehicle's owner's manual to identify any tire speed rating restriction or recommendation that could affect the operation of the vehicle. If the replacement tires have a lower speed rating than what is specified as original equipment, the consumer should be aware that the vehicle's speed must be restricted to that of the replacement tires. Maxxis does not recommend mixing tires of different speed ratings on a vehicle.

Note: Speed ratings apply only to the tire, not to the vehicle. Putting speed-rated tires on any vehicle does not mean that the vehicle can be operated at the tire's rated speed. Refer to the vehicle's operating manual for specific information.

Ply Rating vs. Load Range

- » Ply ratings and load ranges denote the load capability and inflation limits of a given tire size when used in a specified type of service.
 - Ply Rating: An older method of rating load capacity. These are shown as 4-ply rated, 6-ply rated, 8-ply rated, etc.
 - Load Range: This is the current method of rating the tire's load-carrying capacity and is denoted by letters: B, C, D, E, etc.

Uniform Tire Quality Grade (UTQG)

The UTQG, which is required by the government, provides comparative manufacturer information. Tires are subjected to a series of government-mandated tests that measure performance of treadwear, traction and temperature resistance. All testing is done by the individual manufacturer.

- » Treadwear: A measurement of tread durability. Tested against an industry standard, the assigned numerical grade indicates how well the tread lasts compared to a reference of 100. Actual wear depends on the conditions under which the tire is used. Driving habits, vehicle maintenance, road surface differences and climate variations all affect treadwear.
 - Traction: A measurement of the tire's ability to stop on wet test surfaces of asphalt and concrete under controlled conditions. Traction grades are assigned by the UTQG system and branded on

the sidewall of the tire. The traction grade is determined only for straight-ahead wet braking. It does not include cornering, which might be important for customer performance needs.

- Temperature (resistance): a measure of resistance to heat generation under normal operating conditions. The test is conducted under predetermined standards for inflation and loading. Excessive speed, under-inflation and overloading can all cause adverse heat build-up. Sustained high temperatures can reduce fire durability. Temperature grades are branded on the sidewall of the tire.

DOT (Department of Transportation) Certification

A DOT brand on the tire's sidewall indicates that the tire has been certified by the Department of Transportation. Following the DOT brand is a serial number that denotes the tire's manufacturer, the manufacturing plant, tire size code and date of manufacture. While consumer tire registration is voluntary, federal law requires that the selling dealer record the DOT identification numbers and provide the DOT registration form to the consumer.

Mounting Procedures

Be sure to observe the following when mounting Maxxis tires:

- Lubricate both top and bottom beads with an approved lubricant. Never exceed 40 PSI to seat the beads.
 - Both tire beads should be securely seated on the rim.
 - Always replace a tire with another tire of the same bead diameter designation and suffix letters.
 - A new valve stem should be installed in the rim each time a worn tire (passenger or light truck) is replaced.
 - Never put any flammable substance in the tire/rim assembly at any time. Never use any flammable substance in a tire/rim assembly and attempt to ignite in order to seat the beads.
 - Be sure that the wheel is securely seated on the hub face.
 - Do not stand, lean or reach over the assembly during inflation.
 - Be sure that all lug nuts have been properly torqued to the manufacturer's specifications.
 - Be sure that there is no build-up of dirt or debris between the hub and the wheel.
 - Be sure that the wheel is not bent or damaged. The wheel should not be used if:
 - The flange is bent.
 - The welds or rivets are leaking.
 - The stud holes are elongated (rather than round).
 - The wheel has more than 1/16" radial or lateral run-out.
 - Matching tires on four-wheel drive and all-wheel drive vehicles: special attention should be paid to ensure that all four tires are closely matched in height and width to avoid strain and possible damage to the vehicle. Tire inflation pressure also affects the tire's rolling circumference and should be matched according to the vehicle manufacturer's recommendations. Always check the vehicle manufacturer's recommendations prior to installing new tires.
- Warning:** improper mounting, under-inflation, overloading or tire damage may result in tire failure, which may lead to serious injury or death. Tire and rim sizes must correspond for proper fit and application.

Warning: Tire changing can be dangerous and should be done only by trained persons using proper tools and procedures as established by the Rubber Manufacturers Association. Failure to comply with proper procedures may result in incorrect positioning of the tire or wheel assembly which could cause the assembly to explode with enough force to cause serious physical injury or death. Never mount or use damaged tires.

- » If replacing fewer than four tires:

It is always preferred and Maxxis recommends that ALL FOUR tires be replaced at the same time to optimize vehicle performance. In those cases where it is not feasible to install four new tires at the same time, some general guidelines are below. However, if the vehicle manufacturer has alternate recommendations, always follow those guidelines.

Replacing two tires: When only two new tires are purchased, they should be installed on the rear axle, as long as the new tires have a speed rating equal to or greater than the speed rating as compared to the front tires. Generally, new tires will provide better grip and evacuate water more effectively, which is important when a driver encounters hydroplaning situations. When placed on the rear axle, new tires or tires with deeper tread depth than the front tires provide greater traction on wet surfaces. This can also help prevent a possible oversteer condition and loss of vehicle stability.

Replacing one tire: While not recommended, if a single tire replacement is unavoidable, it is best to pair the new tire with the tire that has the deepest tread, and that both be placed on the rear axle. When placed on the rear axle, new tires or tires with deeper tread depth than the front tires provide greater traction on wet surfaces. This can also help prevent a possible oversteer condition and loss of vehicle stability.

Tire Speed Rating Chart

The rating system shown below displays the top speed for which a tire is certified. It does not indicate the total performance capacity of a tire. This information will not be found on all tires. The speed rating denotes the speed for which a tire was designed to be driven for extended periods.

Rating Symbol	Speed (km/h)	Speed (mph)
B	50	31
C	60	37
D	65	40
E	70	43
F	80	50
G	90	56
J	100	62
K	110	68
L	120	75
M	130	81
N	140	87
P	150	93
Q	160	99
R	170	106
S	180	112
T	190	118
U	200	124
H	210	130
V	240	149
W	270	168
Y	300	186
ZR	Over 240	Over 150

For tires having a maximum speed capability above 149 mph (240 km/h), a "ZR" may appear in the size designation. For tires having a maximum speed capability above 186 mph (300 km/h), a "ZR" must appear in the size designation, including a "Y" speed symbol in brackets. Example: P275/40R17 93W at 168 mph (270km/h) or P275/40ZR17 at above 149 mph (240 km/h).

Tire Safety

Riding on worn tires can cause loss of traction, leading to an accident and possible serious injury.

Replace your tires when there is only 2/32" of tread depth remaining! All DOT-approved tires have a tread-wear indicator bar woven into the tread pattern. While this small piece of rubber appears to be a bridge between the two tire grooves, it is only 2/32" high. When the top of this indicator bar is even with the plane of the tread pattern, **replace your tires.**

Another way to judge this indicator: Stick a penny, head down, in the tread. Seeing the top of Lincoln's head means that you're down to 2/32" and your tires must be replaced.

For optimum safety, especially in wet conditions, replace your tires when you have 4/32" of tread remaining.

Always choose the original size or the size recommended by your manufacturer when replacing your tires. **Replacing tires of different speed ratings, sizes or construction could lead to improper tire performance, tire failure and accident, causing possible serious injury or death.**

Changing the size of your tire's height, width, load capacity and/or tread design can change your tire's performance.

If you must use tires of differing profiles, mount the widest tires on the rear of the vehicle.

Don't mix radial and non-radial tires. If you mix radial and non-radial tires, you may have trouble with consistent handling. Handling problems can lead to loss of vehicle control, accidents, injuries and death.

If you must measure the width of your tires, be sure that the tires are mounted on a rim recommended by the Tire and Rim Association (T&RA) at the specified tire pressure.

Depending on a tire's construction, if a tire is mounted on too narrow or too wide a rim, the tire's profile will be changed. The resulting change can unbalance and stress the tire's body and lead to poor performance, tire failure, accidents, injury and/or death.

Never use P-metric automotive tires as replacements for light truck tires or on a vehicle equipped with dual-rear tires. Each tire is manufactured with a specific speed rating and load requirements to ensure proper vehicle use.

Damaged or incorrectly mounted tires can suddenly fail, causing serious injury or death. **Tires should only be repaired by professionals!**

NEVER OVERLOAD YOUR TIRES! Overloading can cause a range of problems – everything from poor handling and poor mileage to failure of vehicle components or tire failure. Tire failure can cause accidents, leading to serious injuries and death. Check your owner's manual to be sure that you're within safety limits for the load your tires can handle. If you're having tires mounted, be sure to check the load limit of the tires to be mounted. The load index of the replacement tires should always meet or exceed the maximum load of the original tires.

Proper tire inflation is essential! Your vehicle cannot handle its load without the right amount of air pressure – and the results could be disastrous, including accidents, serious injuries and death. Most tire failures are caused by under-inflation. Proper inflation is also essential for your vehicle's performance. Unless your tires are properly inflated, you won't get the best gas mileage from your vehicle. In fact, you could lose as much as 5% of your car's optimum mileage by failing to properly inflate your tires.

Check your tire pressure at least once a month, and always check before long trips. Use a tire gauge, and be sure that your tires are still cold when you check them. If your vehicle still has its original tires, use the optimum pressure specified by the vehicle manufacturer as a guide. If you've replaced your tires, check with your dealer regarding optimum tire pressure.

T I R E A S S E S S M E N T C H A R T

Abnormal Tread Wear

Tread wear issues appear as flat spots, or areas of rapid wear on the tire. They can also be seen as deformed tread blocks or cracking in the tread area. This type of wear is usually a result of brake problems, suspension or alignment problems, an unbalanced tire and wheel assembly, or misuse.

Mushroomed Tread

Rapid Shoulder Wear

Rapid Center Wear

Cracking Between Tread

Flatspot

Sidewall Damage

Sidewall damage appears as cuts, tears, bubbles, or scrapes anywhere along the sidewall of the tire. This type of damage usually occurs when a tire encounters a road hazard. This could include anything from a curb to a bolt or piece of metal. Sharp objects or very concentrated stresses usually cause cuts and tears. Bubbles and scrapes occur due to impact damage or prolonged abrasion.

Letter Defect

Sidewall Bubble - A bulge that appears on the outside of a tire is usually a sign of separation.

Sidewall Tear

Sidewall Cut

Tire Separations

Separations appear as bulges on the shoulder or tread face, or as localized wear above the separated region. A groove worn along the shoulder could be a sign of separation. Separations are mainly caused by abnormal heat build up. Excessive heat can build up during prolonged high speed driving, overloaded or under-inflated tire conditions. Separations can also be caused by penetration of water or foreign materials into the carcass of the tire. This material enters through cuts caused by road hazards.

Bead Separation

Tread Separation

Belt Separation

Shoulder Separation - A groove worn in the shoulder of the tire is usually evidence of separation.

Road Hazard

Road Hazard Damage appears as protruding objects or cuts in the tire. Misuse or neglect appears as wrinkles in the inner liner or scuffing that extends around the circumference of the tire. Road hazard damage occurs when a sharp object comes in contact with the tire. Misuse and neglect can occur to severely under-inflated tires or to tires with insufficient clearance between the tire and fenders. It can also occur when dual axle tires are overloaded, or there is not enough clearance between the two tires of the assembly.

Puncture - Normally, the only evidence of a puncture will be a cut that extends from the tread of the tire through the inner liner.

Under-Inflated Tire - An abrasion may run around the circumference of the tire and wrinkles may be observed in the inner liner.

Bead Problems

Bead Problems appear as a broken bead, chafing of the rubber around the bead, or deformation of the bead area. A broken bead can occur when a tire is mounted on an improper rim or carelessly mounted or dismounted. Bead chafing can occur when mounting a tire on a dirty or mismatched rim, or when the tire is in an overloaded or under-inflated condition. A bent or deformed bead usually occurs when the tire is improperly stored, or excessive stress is applied to the bead area during mounting.

Broken Bead

Damaged Bead

Bent Bead

REMEMBER: Your tires can be under-inflated long before you can see or feel any change. Don't trust your eyes, and don't trust your vehicle's feel; trust a tire gauge!

NEVER SPIN YOUR TIRES! Being stuck in mud or snow can be frustrating – but if you spin your tires, being stuck can be dangerous. Your tire might be spinning much faster than your speedometer indicates, causing injury or death as well as damage to your vehicle. A tire spinning off the ground presents an equal or greater hazard. **NEVER STAND BEHIND OR CLOSE TO A SPINNING TIRE!**

Excess speed is a danger to your tires, your vehicle and your safety! Driving above the speed limit can stress your tires, leading to sudden tire failure.

Remember that a mini-spare tire is a temporary fix, and is **NOT** designed to be ridden for long periods of time! **NEVER drive over 50 miles per hour when using a mini-spare tire.** Have a new tire installed as soon as possible.

Check the inflation in your spare tire as well. Spare tires lose air pressure over time. You don't want to discover that your spare tire is under-inflated when you need it most.

You should also periodically replace your spare to prevent damage from aging.

Tire Maintenance and Information

Avoid irregular tire wear, which can contribute to poor tire performance and tire failure! Failing to rotate your tires at least every 6000-8000 miles also means that you'll have to replace them much more quickly. Always refer to your owner's manual for the rotation schedule and pattern specific to your vehicle.

Unbalanced tires, which can be caused by hitting curbs, potholes or other road hazards, affect your ride quality and tire life. You can usually detect an unbalanced tire through vibrations in the steering wheel at certain speeds. If you suspect that your tires may be unbalanced, have them inspected by a professional as soon as possible to avoid excessive wear and damage to your vehicle's front end parts.

Improper alignment will affect your car's tire wear, gas mileage, stability and overall performance. Even if you haven't noticed a problem, you should still have your car or truck aligned at least once a year as part of a regular maintenance program. If you think your vehicle might be out of alignment, your vehicle must be inspected by a professional as soon as possible. Have your tires inspected immediately if you notice any warning signs of improper alignment, which include the following:

- Excessive or uneven wear
- Steering wheel pulling to the left or right
- Feeling of looseness or wandering
- Steering wheel vibration or shimmy
- Steering wheel isn't centered when car is moving straight ahead

If you will not be using your tires for a long period, don't leave them on your vehicle. Store unused tires in a cool, dry place away from sunlight and other elements which can accelerate tire aging over time.

If you're using winter or snow tires, have them mounted on all four wheels. Using winter or snow tires only on the front of your vehicle is extremely dangerous and could lead to handling problems, loss of vehicle control, accident, injury and death.

Keep tires looking their best by cleaning with a mild soap or detergent and a semi-soft bristle brush. Rinse with clean, plain water.
